[The efficacy of the antioxidant preparation Histochrome in the treatment of hemophthalmos in hypertension and diabetes mellitus]

[Article in Russian]

Polunin GS, Makarov IA, Shirshikov IuK, Makashova NV.

Hemophthalmos in patients with essential hypertension and diabetes mellitus was treated by antioxidant agent Histochrome manufactured by the Pacific Institute of Bioorganic Chemistry, Far Eastern Division of Academy of Sciences, Vladivostok. The results were analyzed with reference to localization, volume, and period elapsed since hemorrhage into the vitreous body and by hemophthalmos index determined by biomicroscopy and echography of the vitreous body. Histochrome was the most effective in fresh hemophthalmos with 1-2 point index. Visual functions improved in patients with nonproliferative diabetic retinopathy without hemorrhagic syndrome.
