Defining, Preventing Menopause

Warm-blooded

Or

Cold-blooded

Psalms 119 The entrance of thy words giveth light; it giveth understanding unto the simple.

Previously, menopause has been thought of as signifying the end of a woman's childbearing years. But now new evidence indicates a more defining understanding, leading to its prevention. In this analysis, by disassociating menopause with aging, its cure becomes obvious.

It is known that a woman will lose her menstrual cycle, her ability to carry a child within her, when her diet becomes deficient. The body of a woman can sense whether or not it has the ability to give birth, to bring the child within her to full-term. Movement in the Earth's magnetic field must occur at a rate that provides for sufficient circulation in the cells, of all warm-blooded animals. As with diet, a lack of movement causes a woman to lose her menstrual cycle because the body senses its inability to provide for the child.

The Hand That Rocks The Cradle

The requirement of movement in the Earth's magnetic field is best explained by a study of the Theory of Magnetrition. Magnetosynthesis occurs in the cells of warm-blooded animals, only when cells reorient magnetically at a sufficient rate. We see this implemented in the required turning of the bird's egg during incubation, and the carrying of the young by many warm-blooded animals. If the offspring does not begin immediately walking around after birth, like the cow and horse, this movement is seen to be provided for. The Theory of Magnetrition points out that menopause and cancer are side effects of osteoporosis, which occurs due to a lack of magnetically driven stirring in the cells of all warm-blooded animals. And also predicts menopause occurring as osteoporosis effects female astronauts who have left the Earth's

Defining, Preventing Menopause

magnetic field behind while venturing into space. As warm-blooded animals age, magnetosynthesis decreases. A point at which decreased magnetosynthesis is sufficient to prevent child development within the womb, is the onset of menopause.

Swings, Rocking chairs and cradles, have been attempts at artificially insuring sufficient magnetosynthesis within cells. Now, with the advent of electrical devices such as motors and timers, artificially insuring sufficient magnetosynthesis is made more feasible, both in space and on Earth.

The cold-blooded reptile egg does not require turning during its development, yet the bird egg does. When animals moved from living on the ground, to living in the trees, the magnetotactic mitochondria within the cells began stirring the protoplasm to a higher degree due to the movement, the rock-a-bye baby on the tree top effect, causing the cold-blooded metabolism to become warm-blooded. When the warm-blooded animal moves from the trees back down to the ground it must compensate for the atmosphere of the trees by burning incense or smoking, for the height up off the ground of the trees by shoes and furniture, and for the movement of the trees in the Earth's magnetic field with a shifter (reorienting device), in order to maintain the best of health.

State of the Union? ... and about suffering caused by treatable disease.

Romans 16:18 For they that are such serve not our Lord Jesus Christ, but their own belly; and by good words and fair speeches deceive the hearts of the simple.

"Lacking the military strength to challenge us directly, the terrorists have chosen the weapon of fear."

"Ultimately, the only way to defeat the terrorists is to defeat their dark vision of hatred and fear by offering the hopeful alternative of political freedom and peaceful change."

"The same is true of Iran, a nation now held hostage by a small clerical elite that is isolating and repressing its people."

"Isolationism would not only tie our hands in fighting enemies, it would keep us from helping our friends in desperate need."

"It is said that prior to the attacks of September 11th, our government failed to connect the dots of the conspiracy."

"This creates uncertainty, which makes it easier to feed people's fears."

"Keeping America competitive requires us to be good stewards of tax dollars."

"We have entered a great ideological conflict we did nothing to invite."

The behavior of corporate America at home and abroad did and does invite ideological conflict. It is the present administration that has chosen the weapon of fear and isolationism, and to sidestep peaceful

change.
