PanoramaScan.com is dedicated for eager to learn gynecologists, obstetricians, sonologists and sonographers who want to obtain a huge amount of information about gynecological and obstetric ultrasound (Ob/Gyn ultrasound) , whether a 2D scan or a 3D/4D real time scan.

The global idea about why we are doing this is to offer doctors who work in the obstetric and gynecologic ultrasound field, who wants to apply a state of the art ultrasound scan for their patients with the latest and the most sophisticated updates in machines and software installed.

We want to help those colleagues who want to run their machines efficiently and easily, with a simple approach and a basic understanding of ultrasound physics.

Another approach is how we diagnose and obtain the utmost results we can acquire.

Basic embryology (sonoembryology) as a matter of fact is a fast way to learn by heart what we witness through the use of our transducers while scanning a fetus or a myomata in a gyno scan. By mastering this domain, we will be able to diagnose all our patients or referred patients whether they are gynecologic case, obstetric case, or even a challenging fetal therapy in utero intervention.

Its all there.

Let us know how we can make it all for the best of you.
