In article <1184151660.944619.70820@xxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxxx>, <Alan_K_FL@xxxxxxxx> wrote:

Clark claims that cancers are all due to a liver fluke that only lives in Southeast Asia. Since not all cancers are found in Southeast Asia, her claim is easily falsified.

Where does Clark claim the fluke lives only in Southeast Asia?

She doesn't. She ignores the fact, since it would undermine her claim.

I see that claim made only by the CDC, and without justification:

<http://www.dpd.cdc.gov/dpdx/HTML/Fasciolopsiasis.htm>

Without citation, but not without justification. That's where it lives. If you think otherwise, go find a source. Good luck.

That's because [Clark's claims] are absurd.

What's absurd and bizarre is how long (12 years) after Warren and Marshal's discovery it took NIH to admit that peptic-ulcers are due to an infectious-disease:

Clumsy try at changing the subject. Won't work.

Personally, I don't know enough to judge Hulda Clark's opinion about flukes;

Re: The Bizarre Claims of Stephen Barrett, M.D.

But you feel quite justified in decrying the CDC web page.

The fact that you think you're right and various others are wrong about MCS doesn't make Hulda Clark an authority about anything.
