From the desk of Dr. Anne De Wees Allen

Shalom, they call me the Alpha Scientist. I own a nutraceuticals company; I own a Human testing facility in the University of Florida and have hundreds of researchers working under me. I have spent 24 years of my life in medicine quantifying scientific and medical breakthroughs. As you have heard I received the first glycemic patent worldwide and I received the first patent on L- Arginine in the production of the anti-aging hormones for growth hormone and testosterone, which are the main mechanism of aging.

I am a multi-millionaire many times over for my patents. One of my patents was named breakthrough product of the year by success magazine and I beat Bill Gates out that year for the award. It is always nice to beat Bill Gates at anything I think the message I want to deliver is: I am head of the Agel medical advisory board, the Scientific advisory board so anything that goes in your mouth is my responsibility. I take that real seriously. So in order for you to trust the products, you need to trust me. And in order to trust me you need to know who I am and what I stand for. That is the most important thing.

Here is the point: when people are interested in joining Agel, in taking the products, they want to know who are the people behind the products. Who are they? And it is my job to make sure that you have an answer that will knock their socks off. It is my job to make sure that our science in this company has no holes to be poked in it.

To me this isn't really an MLM company, that's just the marketing form. This is a futuristic scientific corporation. MLM is just marketing. So at the peak of my scientific and medical career, I chose an MLM company. What does that mean?

Now my fellow researchers at the National Institute of Health said to me: "are you nuts? Are you crazy? You can make a lot of money with what you're doing. In the NIH or pharmaceutical company or whatever." But as Randy explains, sometimes, you are lucky enough to be in the

right place on this universe at the right time at cortex. And that cortex is Agel. It is at the right time and the right place and it is about to explode.

Let's go over some of the patents that I have, that I have licensed to Agel, not to a pharmaceutical company but to Agel.
