Hello,

I'm an Italian student.

I must analyse for my university thesis the U.K, U.S.A., Netherlands programme of the Continuing medical education(CME).

I should be grateful if you could address me in the search of information on this topic.

In particular I need information about:

- legislations in which this programme is present;
- the historical evolution of legislations;
- the obligatoriness or not of programme;
- the people involved (if all the sanitary staff or only doctors);
- the process of accreditation;
- the system of credits related to the accredited activities.

Thank you very much!!!

.
