Hello all,

Can someone here share his experiences or opinions about the OptisWorks program? [http://www.optis-world.com/G\\_O.asp?soft\\_id=3](http://www.optis-world.com/G_O.asp?soft_id=3)

It is an extension to Solidworks and advertised to be a full featured optics design program. Its advantage is the full integration of optical elements in the mechanical design.

Is it possible that this program, rather unknown in the community of optics designers can replace a special-purpose program like Zemax and the like?

Thanks, Alexander
