I have no access to this paper.

However a book by Hodgson and Weber "Laser Resonators and Beam Propagation" second edition have a chapter on prism resonators, where some results from the paper are presented.

Hope it helps.

I don't know if it is appropriate to make this request here, but my scientific library is drawing an international blank, and even Amazon tells me:

"Availability: Currently unavailable. We don't know when or if this item will be back in stock. "

I am looking for a paper entitled "Properties of Prism resonators" by H Hodgson, C Rahlff & H Weber, which was presented at CLEO 1991, and was published in "Conference on Lasers and Electro-Optics (1991 Technical Digest Series)", ISBN-10: 1557521891. My library can't locate a copy, for loan or for purchase.

If this paper was available through more legitimate channels I would get it that way, but I'm posting this here on the off-chance that someone has access to this volume, and would be willing to make me a copy of just the one paper.
