Big Bertha Thing invite  
Cosmic Ray Series  
Possible Real World System Constructs  
<http://web.onetel.com/~tonylance/invite.html>  
Access page to 55K Zip File  
Astrophysics net ring access site  
Newsgroup Reviews including alt.politics.bush

301 files from the third battle of cyberspace. (part two)

60 Newsgroup postings were deleted, after 15 hours.  
There were claims of major hacker attack,  
which turned to abashed embarrassment.

It turned out that the NSP owner,  
had sent out a world-wide posting.  
It invited all users, who had forgotten their passwords,  
to just leave it blank. Then a new confirmation password  
would be sent. Cinderella was invited to the ball.

Thank you,  
Tony Lance

Big Bertha Thing format

Anybody heard of the fly-paper trap?  
Where all the flies are collected, in an unsightly mess,  
hanging from the kitchen ceiling.  
The expensive version is the lizard with a long tongue,  
that retracts after each catch.

Take an uncensored version of a usenet newsgroup,  
show the subject line of each thread header,  
with the total number of postings and the net  
number of postings after extracts.  
Put the total number of extracts, in the first line,  
at the top of the list of postings.  
Anyone wishing to search the extracts clicks on it

and finds each person extracted with 2 lines each.  
The first line shows the number of thread headers  
and the second the number of replies.  
Further clicks go down to posting level.

Extract everyone with more than 1000 postings  
on any single newsgroup, from all newsgroups.

Examples of the fly-paper trap can be found on:–

<http://web.onetel.com/~tonylance/news.html>

<http://web.onetel.com/~tonylance/want04.html>

Thank you,

Tony Lance

Big Bertha Thing handcart

1. Gardening section of Daily Telegraph, on Saturday 17th November 2001, shows full front page spread picture of pin-wheel rickshaw.
2. For another picture see;–  
<http://web.onetel.com/~tonylance/pinwheel.html>
3. Both show load perfectly distributed.
4. Both are idealized pictures of a rickshaw that does not exist.
5. A 19th century cheque-book journalist requested a picture of an unusual rickshaw, which was promised for tomorrow.
6. A portrait painter, a landscape artist and a cartoonist submitted quotes, which the cartoonist won.
7. A wheelborrow uses straight arm technology.
8. In common with a handcart, the so called pin-wheel rickshaw, uses bent arm technology.
9. It is physically impossible and so unviable.
10. This is a scientific cartoon, some work, some don't.

Thank you,

Tony Lance
