There is *\*absolutely\** no difference between gravity and magnetism. Magnetism is what drives the electrons' orbits in all mass and electric circuits: PERIOD.

In an electric circuit with a battery, the electrons move in a circuit towards the protons through the force of magnetism (attraction/repulsion). All particles including protons and electrons are regarded as mass in the Spacetime model...therefore:

Postulate A: Protons do not COMPLY with the present spacetime model since Two Protons will never orbit each other (Yet protons are mass that bends Spacetime exactly like all mass bends Spacetime).

Postulate B: Only electrons and opposing protons obey the present spacetime model for mass, example: Hydrogen = 1 electron + 1 proton in orbit.

Postulate C: All planets have polarities (North and South Poles) which are not accounted for in the present spacetime model. It is this polarity of repulsion and attraction only that keeps the planets in orbit with each other

Spacetime model does not explain where the velocity comes that restricts two planets (two masses that bend the spacetime fabric) from falling into each other. (Example you will never see two planets stuck to each other).

New General Relativity and Spacetime Model:

It is indeed the Mass' polarities (North and South poles) that make up the Spacetime fabric: It is the force of repulsion that pushes the planets apart into velocity and the force of attraction that swirls them back together into orbit.

An the above reason is once again because: Two protons will never orbit each other, nor will two electrons (both are mass and do not comply with present spacetime model for all masses including all particles such as electrons and protons).

## sci.physics.relativity: 2. General Relativity's & Spacetime's TRUE MODEL

Only the polarities of the electron and proton such as hydrogen obey the present Spacetime model and orbit each other.....LIKEWISE it is the planets POLARITIES that also generates an orbit in the Spacetime model and not simply the mass bending the Spacetime fabric (larger mass has larger inertia force the smaller mass to orbit the larger mass).
