Good.

Simply anotate the following picture to your sweet dreams and in 30 years it will click-in:

Verbatim

Earth's magnetic field is from induction through it's hot plasma iron core.

1. This generates a flux which imminates from the North and CURVES back to it's South at an eternal Reverbation because Earth's core has a higher permittivity than SPACE.

2. Truncate a conducting copper wire and no more electricity since Space is a bad conductor. Bring two wire ends very very close together and electrons will leap through space (inductance) and you will get electricity. (SINCE space has much lower permittivity but not zero (100% insulation....induce throught the semi-insulatiior/semi-conductor).

Dave's reply what the shit is that mean?

Never mind just remember the model for now and sweet DREAMS.
