George has a pattern of dismissing everything he doesn't agree with.  
You won't get a rational answer.

Example: George has a MS in Physics – from the late '60s. He clings to this as some sort of grail. He needs to ignore all the shortcomings that went into NOT getting a real terminal degree, He'll rant, rave, and rail against everyone else. The bottom line is George thinks his MS makes him special. What he refuses to see, is that just a MS is isn't even the ante to talk around the table. He blusters about how he's a "professional" – He's a joke around anone with REAL chops. He'll snuff and snort about how he's sooooo superior – but the clear, undisputed bottomline is: he's a (mental and emotional) kid. He trots out a mere MS and pretends he knows something. He also does this while talking to REAL scientists – those poor working stiffs with a PhD, grad students, and a real schedule of work.
