Here's another word that won't resolve (George, you really don't understand how this all works and fits together, do you?)

??????

If it *\*were\** seen, it means "fool"

sci.physics.relativity: Re: The God of Russia (bor PocCHH)

Or something else that usenet won't see: ?????, ??????.

Meaning – "You're being made a fool"

"Back in the day", there used to be a language requirement to get a Ph.D. If you were from the US, you had to "master",...OK, be reasonably proficient in, a non-english language. Lord knows that requirement is long past (for most Ph.D programs),...but George, in the late 1960's, as a Ph.D candidate,...which foreign language did you master in preparation?

Lord knows my german and russian are (very) rusty, but even at the relatively late date of my degree (mid 1980s) – some internationalization was expected (I have a "home" language that actually got me past the requirement).

Given your long rants about how
