I thought your point was the delta between the two curves – which is BGD (as you defined it). What does an absolute (100%) value within *\*a\** graph prove??

- > *For the "Phenotypic curve" the BGD starts at 100%*

No – he followed your definition. It may be wrong (actually meaningless), but it's *\*your\** definition.

- > *Likewise, just about everything else in your A-SPoG*
- > *website is wrong too.*

Kind of short on the details here. Point by point counter–references please.
