Interesting thoughts – I never saw it from this point of view. This would be a good argument for those who do not believe in God, if we think of this entity as a finite amount of energy and/or matter (like [Hammond] does with SPoG).

OTOH, "omni-present" would suggest God is infinite, thus the speed of light would apply to the exchange of information between "local parts" of this entity, only. Would be one possible explanation why there is so much evil in this world – "he" just did not get the information until now... ;)
