>*Or we could *speculate* that pixies do it.*

>*You missed the entire point.*

Actually, I did not miss the 'entire point'. I was quite aware of the point you make (and it is a valid one), and as I said, the model does not answer the question of how the interactions arise. As for the other speculations, they are just that, i.e. speculations, but they at least have some kind of reasonable mathematical basis, whereas I suspect that any 'pixie' theory you might come up with would not.
