The "algebra of the causal completion of space-time" is: [Insert mathematical definition of the algebra here].*

There exists a C^* -algebra A of the causal completion of a Minkowski space S and a C^* -algebra B of S such that $A \neq B$. You know nothing, idiot.

> *If you think the algebra of spacetime is something other than the poincare algebra then you think the algebra is: [Insert mathematical definition of the algebra here].*

Contumaciously untutored idiot.

Idiot.

All are consistent, idiot.

"Algebraic Quantum Field Theory".

Idiocy protected by ignorance.

Nothing, idiot.
