Why, you are...

>its been said that everyday configuring is a fact

It's been said by you, but you don't count.

For what?

>becus you are not able to recompile, you are a fool and lost in
>switchies

Are you claiming you compiled it for me?

>if you wanna exploit the beauty of linux you need to optimize the
>kernel to your machine

Did it ever occur to you that computers were invented to be useful
for something other recompiling the kernels and serving as storage
for new software? Some people actually use them for performing
computations and other useful tasks unrelated to kernel recompiling.

>> Only if you're an idiot – wait you are an idiot. Nevermind.

>
>you may use my code and programs you fool, shat tha fack ap

Why would I use anything you had some part in? You've proven that
you lack the common sense god gave a fence post.

>what a moron you are bilge, the guy using slackware "distro",
>are you calling it a distro, i build my distro, you are fool, thank
>you very much

You're welcome very much for whatever that was supposed to mean.

>if you wan a good professional distro then use SuSE you fool,
>tha updates for all shit you might have installed are comming, then
>you just need to press yes to be checked and installed

I don't need some silly piece of software to tell me what to do
or when to do it.

.
