You are really being stupid. The force laws are simple algebra as are nearly all laws of physics. My paper presents the old laws along with some new laws.

That is exactly my point, nothing. It is all correct.

You've been defending QM and SR for the past couple weeks. It is fair to say that your physics is the physics you have been defending.

I am not aware of any quantum measurements I have made, either.

NIST doesn't have charts that I am aware of. Each constant is on a separate page.

Dave
