Paul Marmet (RIP) on his website described an alternative explanation for the muons lifetime increase with velocity based on the principle of mass-energy equivalence and KE. It looks much more sensible than SR.

Hey, are you pretending to be his incarnation? ;-)

Actually, such explanations can not be in conflict with SR and he wasn't the first with such an approach. But watch out: probably due to old age he really lost his mind with "Mathematical Error in the Lorentz Transformation". Happily you can avoid that delusion by using the way-back machine of archive.org, down to a web site version from before he messed up so badly. Or simply limit yourself to reading the stuff that he actually managed to get published in peer reviewed journals.

Harald
