Yet for all your idiotic posting, you have not once proven that general relativity is not an accurate model of reality.

I asked this of you months ago and you simply refused. (EG)

Obviously you can't understand it, but here it is once again:

You neither understood the question nor understand the concept of properly quoting who says what.

I asked you to prove that general reality is not an accurate model of reality. Nowhere in that request was anything about your asinine "model" of reality that is backed up by a wager of 1000 burger bucks or whatever the fuck it is that isn't backed by the United States treasury.
