Before Einstein, Lorentz's aether theory satisfactorily explained the MMX
null
result via his LTs. However, in spite of this, the null result was still
taken
as sound evidence that no aether exists. That is still the official
verdict.

It is a fact, that because of Lorentz's (Fitzgerald's) supposed
'contractions',
it is a feature of LET that any observer moving through the aether will
always
MEASURE the OW speed of light as being c.

This is wrong. OWLS never been measured.
