what is the difference between big bang  
and creation theory

[Hammond]  
Simple:

"CREATION" Refers to the "creation of time itself" (past present and future) with the advent of the human mind (approx 100,000 years ago) which is the "creation of reality", since without a (human) observer, there is no such thing as reality, time, or the universe.

The "Big Bang" refers to the beginning of the Universe within the existence of time itself and happened 14 billion years ago "within time itself".

Hence we see that even though the Big Bang happened 14 billion years ago "within time", we see that "time itself" is only 100,000 years old, hence the Creation which happened 100k years ago is "OLDER" than the Big Bang which happened 14 billion years ago.... or as it is sometimes expressed... "God is older than the Big Bang".

By the way, you have to be "smart" to understand this... the average stalkerazzi heckling Usenet amateur punk CANNOT understand this, which is WHY they can't understand what "God" is. You have to have an IQ over 130 to understand what "God" is.
