The width of the gap in the wall shriks only in an apparent way (actually it "rotates", check Terrell-Penrose), in the evil twin frame.

Dont confuse him;

Everything anyone ever communicated in any way to him, has confused Seppala in every possible anyone con possibly imagine.
I propose we try to confuse him *even more*. He loves that.

Dirk Vdm

His problem has nothing to do with the Terrell-Penrose effect.

True that there may be such effects, but they are 'apparent', often called 'photographable' effects and have nothing to do with the kinematics/dynamics of the problem.

If you disagree with me, ask Tom.
