normal clocks that are not responsive to motion
through a dielectric shouldn't change rate.

I tried to buy a 'normal clock' at the clock store but they told me they are no longer made. They used to be made in Newton's days, but now EVERYTHING that is made of charged particles responds to motion through space, which is a dielectric medium. Maxwell managed to change the laws of physics with his equations.

And the neutronium clocks are too heavy to carry around.

So, let me borrow your 'normal clock' pleeeeee. I will gladly return it just as soon as my twin brings it back from his trip to the Andromeda Galaxy.
