Well, I do understand the principle of equivalence.

No .. you don't. ?You have shown you clearly have nowhere near the
knowledge
of physics or math required to talk about what you ar etalking about.

The principle of equivalence shows that if a baseball is put in orbit
around the earth at the altitude of the moon, it will have the same
velocity as the moon.

Re: Are there any civil anti-relativists?

There you go .. you have shown you have no idea what the principle of equivalence is at all .. thanks for the demonstration

[snip more utter crap]

.
