Well DERR ... we all known (those of us who acutally understand physics) that $t' = t$ in Galillean equations. ?We also know that you cannot have something with the same meared speed in every frame of reference when galillean transforms are used. It is simply impossible because you end up with self-contradictory results.

[snip more nonsense from rbwinn, who knows not what he says]

Well, you certainly can.

No .. you cannot

[snip more evidence of rbwinn not even knowing what is being talked about]
