Just got a web site up and going and enough content is there now for people to judge its validity. I just got someone to tell me the theory is invalid but I need more opinions before I go discrediting the theory.

Many of you must have seen it but most have not really said much about it.

Theory deals with the idea that the sort of time dilation that occurs with gravity can also contract matter.

- 1) NO where on your site do you clearly state exactly what your 'theory' is.

Actually I have no idea it just seems to lead to so many other theories that I can't even decide if I can even give it a name or do I need names and how many. If you don't believe me wait till I get the rest of its contents up.

- 2) the 'three column' format on your 'theory' page is a PITA to read.
- 3) You need to have someone proof read your text. You relied on a spell checker and have the wrong word, correctly spelled, in several places.
- 4) If you look at the Roche Limit and Swartzchild Radius for black holes the size needed to slow light to the speed you require, you will see that neither the barn, the pole nor any nearby observers, nor their planet would survive long enough to make any observations.

Actually that would be true but it's only an analogy a much lesser amount of gravity would work but then the amount of time dilation is also less and would not show the effect as clearly. Suppose you could argue for 2 tiny black holes that at the center of the barn that would

Re: Need opinions for theory.

Re: Need opinions for theory.

slow the speed of light to something more extreme like .001 cm a second at its very center and we just average the speed to 10 seconds over the whole length. With hypothetical stuff you got lots of possibilities and can go to ridiculous extremes.

But yes if you could somehow keep the time dilating component of gravity without the gravity then setting up a real experiment would in principle be more possible but it may not be possible to have time dilation of this sort without gravity. Its not clear if gravity could be caused by the very time dilations it causes i.e. 2 sides of the same coin.

But really no ones going to be able to actually do this experiment with an actual barn but you might in principle be able to do another one similar to the way that the experiment that led to the Shapiro effect was done.

The slower time dose the

-----does----???

Good point.

contracting not the gravity. The theory claims you cant contract matter without also expanding the surrounding space when gravitational time dilation is the case. The theory dose an exceptional job of giving

-----same mistake. The theory seems to be a dose of something. :) -----

alternative explanations for the creation of a universe to even an alternative mechanism for gravitational binding energy and even reversing entropy and more. And why I got so convinced about the theory is it gives a number of testable predictions and you will note that the first part of the site looks at one thats a bit difficult to do in reality but gets the idea across in the simplest way.

I really want some opinions.

Opinions are like noses, everyone has one. But not all should be expressed in public.

Re: Need opinions for theory.

Re: Need opinions for theory.

Broken links on first page.

I suggest you read <http://www.apa.org/journals/features/psp7761121.pdf>

Like I said I just got it up and then I got a bit impatient about finding out more if the theory was any good or really bad after another poster claimed it was a waste of time. Only so much point to worrying about proper spelling on a really flawed theory.

But these news groups are great for testing out different ways of explaining problems to see what works best. Even a good theory if it cant be clearly explained so that both experts and hobbyist can understand it, will probably go nowhere.

This is really nice of you to help its well appreciated thanks.

Got any ideas on what its a theory of.

Dale
