I'd be interested in your telling me how you think kinetic energy is driven by the invariants of the geometry of spacetime.

Objects like kinetic energy, relativistic mass and 3-momentum, are pretensors and therefore belong to the set of geometric invariants that Klein had in mind.

Umm... no. Nice jargon-flinging, though. Might help if you had the foggiest idea of the meaning of the terms when you fling them..

I'm going to have to stand up for Shooby here, PD. I have *never* known Shooby to use a term he didn't have a foggy idea of.

No need to thank me for the kind words, Shooby.
