[snip whatever]

I'm not going through that giant whine fest.

You have successfully blown enough smoke to cover up the initial mistakes in your OP and initial replies by focusing on a mistake on my part.

Yes I made it much much worse by responding the way I do, but either you or Pete could have stopped me in my tracks. All you had to do was take 30 seconds to explain that the classical  $T-V / T+V$  relations I assumed to remain at some level were not true because of the functional form of the Lagrangian. I even ASKED YOU to show the derivation of the Hamiltonian.

Again – bad faith arguing. This is my last post to this thread, but don't let it stop the gloating and crowing. God knows your ego needs all the fuel it can get its' hands on since this newsgroup is the only place in existence that lets you feel intelligent.
