Dear Jay,

If you can't explain it to a six year old, you can't explain it to a physicist, I have read. I wonder who wrote that first?

I agree with Arnold Neumaier that you need an abstract, an introduction, an outline, and short and full versions. The web is a good place for such staging.

I'll add that in sales, we answer objections with canned answers, and in a \$56,000 proposal to the DRS recently, I put the objections and answers right there in the proposal.

You might consider an appendix of criticisms and responses, as this is new material. On the web, a blog of who criticised what first, your response, and whether your response resolved the criticism would be appropriate. All this is hard work, of a different style from the creative act. Persistence counts!

Yours,
