Let's assume this is true. Do you have some evidence that no other paper at the time used the same notation and "some other details"? (Kauffman, Abraham, Bucherer, Larmor, previous papers by Lorentz himself, etc.). Have you read and compared all the papers (original or in facsimilar form) on the topic published at that time? In order to claim Einstein copied the notation from the 1904 paper you have to demonstrate it, since just comparing the papers can reveal simply they both used the same sources (particularly Abraham's).
