>From the bottom of the pit . Two atoms are pushed into the bottom of the pit as thier intence waves of emf push them apart .

Lower in the pit yet , the nurton and proton are pushed into the pit as thier motion moves them out the pit .

The more motion the bigger the pit.

The sise of the pit equals its mass.

A gain in motion is a gain in mass.

An object in motion is energy displacement in motion.

How far in we going varney ?
