Well Mitch, what crank theory is complete without a religion as a result of it and guess what, I got that base covered as well. Is that freaky or what.

Well its really not so unreasonable if you can show our whole universe is a black hole within another older universe and this is why.

Do you remember the Drake equation where he attempts to show the statistical possibility of other advanced civilizations by taking the number of stars and how many planets are likely and how many of those might have life on it etceteras, you must remember it.

Well one of the arguments is that our universe is not old enough for any really interesting civilizations to occur with any common probability.

Well if you have a much older universe we can add quite a bit onto the old equation and go for the gold with ridiculous and outrageous possibilities and still stay within the believable or at least sort of.

I cant be a Christian its too ridiculous so much so that where do I start so like any intelligent nut job I wrote my own religion and it goes like this.

Any intelligent and sufficiently advanced civilization, advanced enough to not only prove their was no god, could also proceed to create its own. And why not, absolute power corrupts, absolute technology inspires, so they go for it what why and how and then what then again, do I hear The Sounds of Mantra, here.

Ok if its possible to actually do this is it also possible to collect up the souls of the long dead into a nice and interesting archive, don't know but it would be a bit more like a really usable super duper shake and make god, if it could. A marvel of engineering for sure.

Ok skip a few billion years and their universe dies of heat death what then, well migration of course eternity cant be eternity unless you can figure this sort of stuff out, now can it. Great big can that new universe aint it.

Ok it gets board its own civilization gone so what's it to do but adopt all sorts of stray planets of displaced souls interesting enough to bother with.

There you have it, an after life world made by a god that existed before time or rather our time and we get bothered with because he is board and the curse of many a party, every new visitor brings his mother, mother in law, the dog, well you get it and its all in intelligent speculation.

Try that blind faith from a wimpy stooped bible that cant hold a single decent equation.

Dale

Now collecting donations for the church of Drake Equasionism. Or maybe I should just sight up for cranks anonymous as I cant believe I actually came up with a religion, I mean really its getting more and more ridiculous now and where will it all end.

sci.physics: Re: Gravity is a Continuum

Have fun with it, who knows it could be true but it might require dying to find out.
