Hi Eric Gisse,

Blaming me for your difficulty reading newsgroups,
you wrote, news:o15fg0tk206hejh57blcehkmogpmcl9hrj@4ax.com

<< The problem is Relf, not Agent nor Google.

Every time a 300+post discussion threads out,

I don't want to have to dig through it just so

Relf's idiocy remains compartmentalized. >>

<< Yes, it IS his fault. This is the crux of the matter,

he spawns new threads for NO REASON and its fucking annoying. Killfiling him just
scatters the replies to the winds.

I'm going to the source. >>

In 40Tude Dialog,

The following two lines will score my posts,
and all replied to my posts, down so that
you will not see them unless you switch to
the " read " view.

=-1 Message-ID "Jeff_Relf"

=-1 References "Jeff_Relf"

The equal sign halts further scoring.

Never have I nymshifted, so that should take care of it.

I recommend you switch to Dialog because it's free
and because it is hyper customizable.

Dialog's scripting language is Very powerful too.

Dialog can search message bodies, headers, message lists etc.
