Steam dont burn , but injecting o2 into 600 psi steam will blow up just the same and expand real quick.

Putting a bit of makup heat (fuel) in with it is rocket fuel and steam boosted by o2.

YOUR conversion chart for engine fuel use wount work here.

You used the same chart with the hydroelectrics .

USE THE INTAKE air per minute.

The same volume per RPM ,,60 rpm is 1/100th 6000 rpm ...then O2 makes that 60 rpm so strong it would melt your car pistons.

The Same intake volume per stroke <<<<<

60 rpm LPE vrs 6000 rpm in your car.

The same mix going in ,,the LPE is doing the same work on 1/100 th the fuel.

your car has 80 foot pounds tourk wile the lpe has 2000 foot pounds
T.

The trans is gone , the rods and pistons and crank are gone. The valves are electric .

Its a 2 cycle gas engine and water is the pistons.

The rotor is an invention ,,the injectors ,,the valves ,,director
,,supperconductor parts.

Jesse James uses the same mill I make rotors with .

Ballanced Gas Air Steam Liquid Piston 2 cycle engines ,,TGOTG-MOE

This engine is like no other.

It will blow your mind,,its real.

Im sending the grab down 1200 feet ,,it picks 1000 tons , I have a counter mass of water that will come out of the water on the other side of ship , Im taking a break befor I go run it up and put a small ship dirt and all in the hold.

It was hauling 800 tons of nickle .

\$ 15000 a ton X 800.

12 million bucks for a weeks sailing.

4 wrecks yet to load.

This ice breaker is 14000 tons loaded.

I was looking for another ship an found these 50 ships within a 10 mile box .

The island gets 1/2 and thats why im going it.

Im co owner of the south pacific island .

sci.physics: Re: Question on water pressure on dam

Im going to raze the island up 5 feet in places by dreging the deap. 5 of these ships loads are worth 10 mil each and I can pick them up for 1 load. The people are building a resort house by house. up comming cruise liner built in 2002 bought for 120 mil but worth 400 mil will service the resort.

Its a billion usd megaventure 4.
megaventure 1 was an oil tanker.

The 2 year old super ship cruiser is getting LPE in drydock . Taking off the pods and leving the engines where they are but disconnected.

The first steam ship ran 5 years befor anyone noticed.
