No, not true. One cannot reject teachers "as if they were untrue accusations..." But now I understand your problem; it has to do with English not being your primary language. With such a handicap, why do you not slow down in your reading so as to try to not miss any words or to try to correctly understand what is being said? You keep wasting people's time with your misreadings and miscomprehensions.

Oh, yes, I forgot to mention them, too. You have every right to be there, so don't let them throw you out (if that's not the reason you are posting here). That is where you belong, your buddies are there.

This ng is not for you, you're too smart for us, too much math involved which is way over our heads. Go there, my son, and be welcomed with open arms – you all deserve each other!

There, see how much more you know than any of us here? Go in peace, my son.

> *Bye,*
