<http://business.news.designerz.com/chinas-crude-oil-imports-in-july-up-nearly-40-pct-year-on-year.html>

"China's imports of crude oil in the first seven months rose nearly 40 percent from a year ago as the energy-hungry economy expanded at close to double-digit levels, state press reported.

In the seven months to July crude imports rose an annualised 39.5 percent to 70.63 million metric tonnes, the official Xinhua news agency reported Friday, citing figures from the General Administration of Customs.

Crude oil imports rose 39.3 percent year-on-year to 61.02 million tons in the first six months, it said.

The world's second largest oil consumer after the United States has seen oil imports soar as flagging domestic production has failed to keep up with booming economic growth and demand for gasoline in the auto market."
