GravityPhysics@webtv.net (tj Frazir)

Time it toulk the bullet to stop is 0.34 ms. Time it toulk to overcome  
the blocks resistance to impulsive force is 0.58 miliseconds.

0.24 ms is left to move the block.

Notice the oposet force if the bullets momentun would equal the  
kick back of the gun and would have sent te block over 50 yards if not  
for the fact the block wount move much because because the equal oposit  
force of the impact includes the resistance to implusive force.

How far the block went after you hit it proves there was  
resistance to impulsive force or it would have gone allot farther.

Now having Busted you some more hanson ... what facts will  
you defend your self with ?
