Its a red laser xray and a supperconductor photon detector hansen
..and Im 750 miles a day 3 days from tongass forest islands alaska.
3 gold targets . One should have been found allready because the ship
ran aground and its timbers still stick up and it has over 4 tons of
gold. Another ran int the same island with 800 pounds ,,then they bult
the first light house on that same rock.

A sidescan wount help you.
there are 1000 wrecks in the chanel allone.
You nead an underwater xray to play this game and a photon detector or
xray film and long exposure .

If they dropped a nuke Id go get it.
Theres nothing left of the scramjet to go get if it hit the sea at 7000
mph.

But the gold ship hit the rock at 5 knots ..
thats 4 tons of gold in 50 feet of water 8 mile south and 800 pounds on
the same island the light house is on.

Thanks to spaceimaging I can see them from space .
Its all nugets ,,75 boxes (75 people died) 4 were stranded on the
light house rock befor it was built.

One byte , 1/2 hour and that entire vessel and 1000 tons of dirt will
be in my hold .

with 4 tons of gold 16 million bucks.
Thats a small for fun find.
Gold ships are not the money makers .
40,000 ton ships are the money makers.
30 years ago when 30000 tons of nickel sank it was cheep. Now its 9
bucks a pound.

A can conect cables to its port side and moore us to it and unload its
holds like it was at the dock.

I made 1/2 billion bucks this year hansen !!!!

usa steel was more than glad to get nickel.
skagway knows all about the giant from alaska. The rusian sitka
alaska town and TONG Juneau (giants from forest)
from skagway befor hoonah in xray I found over 100 targets . aks for
one and Ill hand you the exact gps on a golden target.

each target is around a ton of gold.
Then I found the big one from space.
No one has EVER dove th hot springs.

the one that keeps the channel from freezing.
xray pixy shows gold is under that sediment.
allot of it. the largest gold find in alaska is yet to be had.
2 million people think its a whale ship thats sticking up. Its a
gold rush ship .
Another is in plain view in a river .
I walked on it as a kid. Now I know what ship it is and where it is.
people sailed to the gold rush in thier own boats and no one knows how
many.
from china , england , japan , and usa.
ships colided ,,ran into rocks..
the worlds record of wrecks in one channel.
This channel has more buoys marking it than any place else on the planet.
It was NOT ships from usa ,,it was 1000s of ships from around the
world.
ton after ton of gold lost in the channel.
usa lost 1500 vessels ,,japan lost 150.
In a 100 miles ,,so many ships ,,so many targets only an idiot would
go to alaska fishing when they will snag on a ship.
take a grab and dig the wreck up and sort it out on deck.
If you want an easy nuget ,,the ice glasher carries gold to the sea
..use xray laser underwater ad you have a method to pluck nugets thew
5 feet of sediment.
I can see threw 20 feet of sediment by bouncing xrays off gold and
seeing them with a photon detector.
50 grand will get you a cheep one off the shelf now days.
5 years ago you never herd of such a thing.
unless I told you.
the xray laser restarts the gold rush because gold in under the
sedimants in the water.
