Petty little man. I made a typo.

I was Jewish as of this morning. And I never lived in Germany. I do not suffer foolishness gladly and I suffer fools even less. I am intolerant of stupidity and I am intelorent of ignorance.

Nonsense! Physics is all about making quantitative predictions about what will be observed under certain conditions. Falsified theories are

ultimately dispensed with and replaced by better theories.

This is

- > *actually funny! Does anybody think that the current fads in physics*
- > *will miraculously produce "the best of all possible theories"*

I expect good theories will produce correct predictions and suggest useful and productive things to engineers and technologists.

- > *predictions in the next few thousand years.*

Reality will never be fully known by humans. Our senses our too crude and our wits are too limited. We do the best we can given our limitations. We never get to the rock bottom of things. We are fifteen orders of magnitude from Planck Length and there is no guarantee that that is as far is reality goes.

All theories are at best not yet falsified. One should not become too attached to his favorite theory. In the fullness of time all of our theories will be replaced by better ones.

Theories are high class educated guesses.
