The biggest advantage of an underground six lane roll on , roll off rail system is the enormous saving in human time.

If just one fifth of American drivers say 20m people used it for two hours a day , it would save 40m hours of human time and even if you value such time at say \$10 an hour , it would save \$400m a day , ie \$12b a month or \$144b a year!

So instead of fretting and getting your arteries clogged fuming in traffic jams , you drive on at a station near you and drive off at your work place , or even non car owners can benefit from such fast safe systems .

The reason the west is rich is that it gets machines to do the work , humans have to do in the poor countries and this rail system would be a quantum leap forward.
