Zero chance. Since the only people in the whole universe to date that believe that Hawking radiation comes from anywhere other than the Internet are Hawking and his lab astrologers in Australia, Los Angelos, and New York.

That's quite obvious, since gravity is not the dominant force in a spin hole either.

Since Brookhaven has been redesignated as a US National Laboratory as:

The Intergalactic Galileo Wannabee Laboratory.

And so hence, does not permit travel to Mars.
