Can we have a complete list of cranks here.

1. Fusioneer
2. Greysky
3. newedena
4. Y.Porat
5. Thomson
6. Ken Seto
7. TomGee
8. Smart Model
9. Retic
10. John Sefton
11. Freddifix (?)
12. (who else)

Ok. Cranks. How many of you have read this book "Feynman Lectures on Physics 3 Vol set"??

You guys keep committing very basic mistakes that Heymann kept on correcting. It's very frustrating. How can you take apart the Standard Model if you are not veteran in it?? We know the Standard Model is not complete and something can turn it into a subset. But to enhance it, we must be adept in the in and out of Standard Model so as to be able to change it successfully.

So, I recommened cranks to read up some basic textbooks such as Feynman's and be familiar with all the concepts before spewing horse manure as Heymann love to call it. It's getting frustrating to waste time reading rubbish every morning.
