phoenix.

I'd be damn surprised if you get anywhere within this endless loop fiasco. These folks absolutely worship Einstein and the likes of Plank to death, and every bit as determined as Osama bin Laden, they'd just as soon take the likes of you and anyone else along for the ride, inventing WMD if need be.

According to these all-knowing mainstream status quo wizards, and even though there are trillions upon trillions of photons/atom, it seems their notion of visible light which represents the least population of the available photons, is that photons amount to absolutely nothing, having zero mass and thereby zero apparent energy, that not only can their zero mass photons not ever exceed the speed of light (and apparently that goes as for any frame alternative frame and/or differential of coexistence), photons also can't possibly travel slower than 'c', much less represent any 'zero-mass dump trucks' capable of hauling energy and a small amount of mass.

Of course, I've somewhat disagreed and, lo and behold they don't much like it when folks disagree with their all-knowing expertise, as that's why they're here within this internet of disinformation-R-us instead of actually accomplishing something/anything on behalf of humanity, devoting all of their talents and expertise into whatever it takes as to bashing others even so much as looking outside of their cozy publicly funded mainstream status quo box. Thus they're not actually intellectual bigots, just plain old biologically run of the mill two faced bigots that'll do whatever it takes (without remorse) as to further perpetrate whatever cold-war and resident warlord agenda suits their cause.

On the other hand, and since I'm not so warm and fuzzy all-knowing, I have a couple of testy topics, some of which dealing with photons;
Photons/Universe or Neutrinos/Universe
How much of Earth is shrinking; 10 mm/year?
Terraforming the moon, before doing Mars or Venus
Anti-Matter/Photons as Blackholes, or 1e100 photons/atom

sci.physics: Re: What really is "Light" (assuming SR is correct)??

The Moon, LSE-CM/ISS, Venus and beyond, with He3 to burn
Lunar/Moon Space Elevator, plus another ISS within the CM
Space Policy Sucks, while there's Life on Venus
Ice Ages directly regulated by Sirius
SETI/GUTH Venus, no kidding
Terraforming the moon
Relocate ISS to ME-L1

And, if none of those are worth your time or within your expertise, in that case I have a few dozen other topics I'd like nothing better than improved math and of whatever otherwise makes the most sense, of which making sense doesn't necessarily have to be what the status quo has been insisting, as God forbid should they could be even 1% wrong.

Basic township that's situated upon Venus:

<http://guthvenus.tripod.com/gv-town.htm>

Basic LSE (Lunar Space Elevator)

<http://guthvenus.tripod.com/lunar-space-elevator.htm>
