Righto (right–o, righ–to as they say in the UK), I should explain that I am doing the Nonconformist thing and giving my list of references before the rest of my postings in this thread, rather than giving them during or after the rest of my postings. This is not the end of my postings in this thread but the beginning, God willing (oh, oh, I said the G–word :>)

So now that I have explained this, I don't want sci.physics "readers" to think that the purpose of this thread is to make Lady C_____ the butt of my jokes (did I say that right?).

What I propose to do is to refer to papers by authors and years during the remainder of this thread, as for example Rylov (2005). If there is more than one author, as with Costin, I'll type Costin (2002) for example. This will save us all time later hopefully. If not, you could try contacting some of the authors to rewrite their papers :>)

Now that you have the idea, hopefully, I should give a few years if anybody is curious.

Ugla et al (2003)
Smoller et al (2003)
Santini et al (2005) (7 April actually!)
Pinheiro (2005) (21 Mar actually!)
Morales (2003)
Marcolli (2003)
Nikolic (2005) (this is c with a left accent on top, which I think is "ch" or if not "ts")
Luzzatto et al (2003)
Luzzatto (2004)
Katzourakis (2005) (15 April actually!)
Iovane (2003)
Iovane et al (2004)
Hruska (2004)
Gouezel (2004)
Fannjiang et al (2004)

Re: Dynamical Systems and Expansion–Contraction

Davis (1996) (oop! Where's that Berkeley spirit :>)
Brout et al (1995) (oops! Where's that Belgian spirit :>)
Berkes et al (2005 (24 Mar actually!))
Aguilar et al (2005) (29 Mar actually!)

Does this remind anybody of 1–2–3–4 V–I–E–T–N–A–M by mathematics Professor Tom Lehrer, only backwards? It was a catchy tune. Some friends tell me Tom got it from somebody else who first made it popular. I think that I prefer George M. Cohan's "I'm a Yankee Doodle Dandy" most of the time, though. George and Jimmy Cagney – now there's a Yankee :>)
