Probably not here :-)

Very true. My main point is Nick has the, erm, tendency to make very bold assertions (often contradictory and normally lacking in internal logic) and when ever any one disagrees or points out his mistakes, his response is to demand proof. He has stated himself that he lacks the basic mathematical understanding which is why his conclusions are often suspect.

Re: Intelligent Design?

I suspect Nick thinks God is the reason we can not fall at the speed of light and I would be interested to he explains himself.
