{That's not a problem. For a description of one of Mike Oliver's failed attempts, see <http://www.privateislandsonline.com/article2.htm>. --MJ}

Re: High strength fibers for high pressure tubes.

Re: High strength fibers for high pressure tubes.

{People have been trying to do that for years. Thug governments will not give up their sovereignty for mere payments of money. (Hey, they have the power to create "money" out of thin air! :-) --MJ}

{It doesn't work. All it would take would be one free country strong enough to defend itself, and the entire global slave system would come crashing down. Result: any overt attempt to establish such a country will be crushed. That leaves two options: you establish a free country out of sight and out of mind of the rulers of the global slave system, or else you establish the fundamental structure of a free country in their plain sight, but carefully conceal the ultimate purpose of what you are doing. Option one requires a frontier; and option two requires the creation of contract-based arbitration systems in multiple locations, under myriad circumstances, with widely varying stated purposes, all over the world, with the unstated intention of awaiting an opportunity to assume sovereignty, and seizing it when it appears. At present, with no frontier, option two is the only way to go. --MJ}
