Well if you don't understand that space and time are inseparable I suspect you will run into much trouble in this field.

Hint: I've had a lot of conversation with professional cosmologists in my life, and several have already looked at my FAQ page (apparently you still didn't bother). So far, all have agreed with what I wrote.

"The views of space and time which I wish to lay before you have sprung from the soil of experimental physics, and therein lies their strength. They are radical. Henceforth space by itself, and time by itself, are doomed to fade away into mere shadows, and only a kind of union of the two will preserve an independent reality." Hermann Minkowski, September 21, 1908.

You are confusing special with general relativity.

Re: Bjoern BBT flops yet again.

So, Boern, in GR, time and space are not interdependent, but in SR they are?

Err, we were talking about "inseparable" above, not "interdependent".
Reading comprehension problems once again?

Bye,
Bjoern
