Hi all,

I'm working on a project for which I need a transparent thin film of piezoelectric zinc oxide. I've tried several search engines and ThomasNet, but I think I may have to try to find a company that does custom product design. I haven't tried 3m yet, but I thought I'd ask others first if anyone knows of a company that produces zinc oxide in thin film form for bulk pzt applications. Thanks for your time and effort.

J. Hoobler
